

What is the purpose of the clitoris if it is not 'orgasm'?

URINATION – urethra – penis (urine)

PROCREATION – vagina – penis (sperm)

ORGASM – clitoris – penis (orgasm)

Is the female more evolved or does the male just have it easy – convenient?

My interest is not BODY PARTS – the clitoris/vagina debate is endless.

My interest is the MENTAL TURN-ONS OR PSYCHOLOGICAL AROUSAL.

This is the root cause of the confusion over which anatomy is involved in orgasm.
